## **DETAILED ACTION**

## Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 18, 20 to 24, and 30 to 37, drawn to a method, system, and software program for developing multiple natural language versions of software, comprising providing for the translation of a first component of said source software program by simultaneously displaying for a translator (i) said first component of said software in a first format, and (ii) said first component of said software translated into said second language in a second format, classified in class 704, subclass 3.
  - II. Claims 38 to 40, drawn to a method of developing multiple natural language versions of software, comprising providing a first iteration of a computer program, providing an interface for a translator to provide a translation of at least some of the source text into a second language, displaying for the translator, a first display screen of a first version of the computer program in the first natural language, and displaying, for the translator, a second display screen of a second version of the computer program in the second natural language, classified in class 704, subclass 277.

The inventions are distinct, each from the other because of the following reasons:

Application/Control Number: 10/042,658

Art Unit: 2626

2. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, Invention I has separate utility such as for dual monitor translation of video game software, whereas Invention II can be employed for display of text for a computer program for preparing tax returns with first and second display screens sequentially displayed on the same monitor. Additionally, Invention I is directed to translating a first component of a source software program, whereas Invention II provides for translation of at least some of source text of a computer program through an interface for the translator. See MPEP § 806.05(d).

Page 3

The examiner has required restriction between subcombinations usable together. Where Applicants elect a subcombination and claims thereto are subsequently found allowable, any claims depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicants are advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

3. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required

Application/Control Number: 10/042,658

Art Unit: 2626

because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

4. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art due to their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicants are advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should Applicants traverse on the ground that the inventions or species are not patentably distinct, Applicants should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Application/Control Number: 10/042,658 Page 5

Art Unit: 2626

5. Applicants are reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

## CONCLUSION

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Martin Lerner whose telephone number is (571) 272-7608. The examiner can normally be reached on 8:30 AM to 6:00 PM Monday to Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David R. Hudspeth can be reached on (571) 272-7843. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
